PATENT PENDING

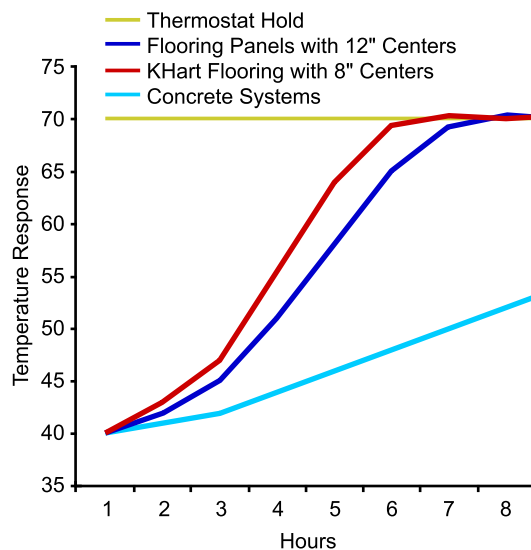

ABOUT

Statistics have proven that radiant floor heat is the best possible heating solution, but too often these systems are unaffordable for most families. Until now...

Ever hear the saying "Form Follows Function?"

- Its one panel design is simple
- Its one panel design is practical
- Its one panel design is affordable

The response time (see graph below) surpasses other common in-floor heating systems. A quicker response time means steady, even temperatures regardless of outside temperatures.

KEYPOINTS

- **Economical.** Installation significantly reduces labor and material costs. Because it raises the existing floor only 3/4", it can be easily used on new or remodeled construction.
- **Versatile.** Any finished flooring can be applied. Ideal for all carpet, tile, linoleum, laminate floor coverings, and hardwood flooring.
- **Comfortable.** The 8" on-center tubing geometry distributes even and perfect heat.
- **Practical.** Heat is radiant, starting from the floor. Heat is not wasted at the ceiling.
- **Simple and affordable.** Ideal for the "Do-it-yourselfer," once the panels are in place the tubing easily interlocks into the groove and no adhesive is required.
- **Leak proof.** The tubing is visible when the finished flooring is applied, eliminating punctured tubing during installation.
- **Smart investment.** Studies have shown increased resale value on homes with radiant heat.

ALIGN-SIMPLE™

KHart Flooring now features Align-Simple Technology. This technology allows the user to simply fasten the panels prior to tubing installation without the frustration of channel misalignment. The channel edges can be misaligned up to 1/4".
